

Asset Control International BV

Description of WM interface:

AC Plus offers an off-the-shelf solution that enables you to implement the commonly used data feed quickly and cost-effectively. A ready-to-run interface for WM VF1 Feed for Reference Data and Corporate Actions is available in the SmartFeed set of feeds.

Using AC Plus, you can choose to either view the WM data as-is using all the German language attribute and enumeration naming conventions or to view the data in a normalized model, in which English naming conventions are used.

Firms that select the AC Plus ready-to-use interface for WM VF1 Feed can receive, process and store data from all "Arbeitsgebiete" (Production Areas) and "Profilen" (Classifications) including for example product classes such as: Basic Data, Risk and Asset Management data, Derivatives, S&P, Fitch and Moody's ratings, Fund numbering and VAG Funds.
