

CPB Software AG

Description of WM interface:

WMACCESS via Internet allows the query of information on securities, especially tax-relevant financial data like interim profits, capital gains of equities and from real estates, and securities master data as well as all income dates for a comprehensive tax reporting like income statements and annual certificates for tax purposes.

For the supply of third systems with reworked WM-data, the component Interface-Data-Conversion (IDC) can be used. IDC is a parameterisable interface of the WM-data to operative systems, which can be defined by the user.

If a third system requires information which is not provided in a WM field, IDC further offers a comfortable, easy to administer mapping tool and set of rules.

With a comprehensive range of data combined with a sound scope of functions WMACCESS provides the perfect solution for efficient and economic use for

- Large banks
- Private banks
- Cooperative banks and savings banks
- Transaction banks
- Direct banks
- Foreign banks
- Securities-related service companies
- Financial service providers
- Investment companies
- Insurance companies
- Auditing companies
- Management consultants
- Fund managers
- Tax consultants

Besides the service offer of WMACCESS via Internet, CPB Software also provides further services around WM-data.

- Flexible and easy provision of individual data feeds
- Monitoring function with notification

A cost-free test access and further information are available at <http://www.wmaccess.com>
